S. No.	Month	Chapter / Unit Name	Learning Outcomes
1	April	Large Numbers Around Us	- Read, write and compare large numbers. - Apply place value concepts in real-life situations. - Develop estimation and reasoning skills.
		Arithmetic Expressions	- Apply BODMAS rule correctly. - Simplify arithmetic expressions accurately. - Solve practical numerical problems.
2	May	Decimal Numbers – A Peek Beyond the Point	- Perform operations on decimals. - Use decimals in measurements and money. - Interpret decimal values in daily life.
3	June	Working with Fractions	- Compare and simplify fractions. - Perform operations on fractions. - Use fractions in practical situations.
4	July	Expressions Using Letter Numbers	- Identify variables and constants. - Form algebraic expressions. - Translate statements into algebraic form.
		Parallel and Intersecting Lines	- Identify different types of lines. - Understand geometrical relationships. - Apply concepts in diagrams and surroundings.
5	August	Number Play	- Recognize number patterns. - Develop logical and analytical thinking. - Apply divisibility and pattern concepts.
		Triangles and Their Construction	- Classify triangles. - Construct triangles using given measurements. - Apply geometrical reasoning to find unknown angles.
6	October	Congruence (Geometric Twins)	- Identify and explain the criteria of congruent triangles. - Apply congruence rules to solve geometrical problems. - Compare and evaluate congruent figures and their properties.
		Operations on Integers	- Identify integers and explain the rules of operations on them. - Apply addition, subtraction, multiplication and division of integers in problem solving. - Analyse and evaluate numerical expressions involving integers.
7	November	HCF and LCM	- Identify factors and multiples and explain methods of finding HCF and LCM. - Apply prime factorisation and division methods to solve problems. - Compare and evaluate numerical relationships using HCF and LCM.

8	December	Multiplication and Division of Decimals	- Identify decimal numbers and explain rules of decimal operations. - Apply multiplication and division of decimals in real-life situations. - Analyse, compare and evaluate the accuracy of decimal calculations.
		Finding the Unknown	- Identify variables and explain simple equations involving unknowns. - Apply mathematical operations to find unknown quantities. - Analyse, compare and evaluate different methods of solving equations.
9	January	Connecting the Dots	- Identify and explain concepts of mean and median. - Apply data handling and plotting techniques to represent and interpret information accurately. - Analyse, compare and evaluate graphical representations, patterns and statistical data.
		Constructions and Tilings	- Identify and explain basic geometrical constructions, tangrams and tilings. - Apply geometrical tools to construct angles, lines and figures accurately. - Analyse and evaluate symmetry, patterns and geometrical designs.

Subject: Science

S. No.	Month	Chapter / Unit Name	Learning Outcomes
1	April	Before We Begin Electricity and Circuit Basics	- Understand and follow school science lab safety rules and learn how to do scientific experiments step-by-step. - Identify basic electric parts and read common circuit symbols correctly. - Build working electric circuits and see how open and closed circuits work differently. - Group objects around the classroom into materials that pass electricity (conductors) and those that block it (insulators).
2	May	Metals and Nonmetals	- Compare different materials by seeing if they can be beaten into sheets (malleability), drawn into wires (ductility), or make a ringing sound (sonority). - Explain how metals rust or react with air, and list how metal mixtures (alloys) are used at home and in factories. - Use simple science thinking to solve practice test questions.

3	June	Inside Plant Life: Essential Processes	• Learn how plants live, including how they make food (photosynthesis), lose water (transpiration), and breathe (respiration). • Understand how water and nutrients travel through a plant using special tubes called Xylem and Phloem. • Review baseline progress through the Periodic Test - I on June 29, 2026.
4	July	Acids, Bases and Neutralisation Heat	• Sort substances into acids, bases, or neutral items using natural indicators or chemical solutions. • Learn how mixing acids and bases together (neutralization) helps fix problems in farming soil, factory waste, and insect stings. • Compare thermometers used by doctors with those used in labs, and learn how to read temperature scales. • Understand how heat moves through things (conduction, convection, radiation) and how it creates land and sea breezes. • Evaluate progress and knowledge in the Periodic Test - II on July 31, 2026.
5	August	Time and Motion	• Learn about old and modern clocks used to measure time, and see how a simple swinging pendulum works. • Tell the difference between moving at a steady, unchanging speed and moving at changing speeds. • Use the speed formula ($\text{Speed} = \text{Distance} / \text{Time}$) to draw and read distance-time graphs.
6	September	Half-Yearly Review Track (Chapters 1, 2, 3, 4, 5, 7 & 10)	• Review and practice all the main science words, experiment methods, and formulas learned during the first half of the year. • Assess overall understanding and performance through the mid-term half-yearly exams.
7	October	Physical and Chemical Changes	• Tell the difference between simple changes that can be undone (physical changes) and changes that form brand new things (chemical changes). • Spot signs that a chemical reaction is happening, like a sudden change in color, heat being given off, or bubbles appearing. • Explain why metals rust and learn how to protect them using methods like coating with zinc (galvanization) and forming crystals.
8	November	Life Processes of The Animal World	• Compare how living things breathe, seeing the difference between breathing with oxygen (aerobic) and without oxygen (anaerobic).

			• Learn the body parts and functions that make up the human breathing, blood circulation, and waste filtering systems. • Demonstrate comprehensive understanding of the chapter in the Periodic Test - III on November 30, 2026.
9	December	Light Growing Up: Adolescence	• Prove that light travels in a straight line and learn how light bounces off flat, curved, and round mirrors or lenses. • Learn about the body's internal glands and hormones that cause physical and emotional changes during teenage years. • Learn how to make healthy choices, including planning a balanced diet and handling daily stress.
10	January	Motions of the Earth	• Explain how the Earth moves by spinning on its own line (rotation) while traveling in a loop around the Sun (revolution). • Use models of the Earth and Sun to understand day and night, changing seasons, and the longest/shortest days of the year. • Demonstrate mastery of these topics in the Periodic Test - IV on January 18, 2027.
11	February & March	Annual Examination Term (Chapters 2, 4, 6, 7, 8, 9, 11 & 12)	• Students can pinpoint exactly what has been mastered and map out remaining areas for growth.
